

Washing instructions

We would like to point out the washing instructions for Le Nouveau Chef's clothing. We recommend that you follow this prescription to keep the quality of the products as good as possible.

Wash clothes before use

We advise you to always wash the garment shortly at 30 ° C before use with a small amount of detergent. This removes the finish of the clothing and makes the fabric breathable.

General instruction

For all clothing, the result is best when washed according to the washing label and the washing machine is not overloaded. Turn the clothes inside out before washing. The clothing becomes cleaner, can damage less quickly and creases less. The use of a laundry bag keeps blouses and shirts beautiful.

The best advice for cleaning clothes is to wash them as soon as possible after wearing them. This gives stains less chance to penetrate deeply into the fabric.

Choose a program with wrinkle control, do not use fabric softener and moderate the amount of washing powder.

Clothing with a zipper

We recommend washing these clothes inside out with a closed zipper. This prevents damage to the zipper. If the clothing is not washed in accordance with this regulation then the warranty on the zipper expires. Chef's jackets with a zipper are less suitable for industrial washing.

Very contaminated clothing

The advice for soiled white clothing is to soak it in Biotex® and then run on the prewash and main wash program. The optimum result is obtained by using slightly more detergent in the prewash than in the main wash. We recommend to wash clothing with grease stains at a lower temperature (40 ° C) and clothing with fruit and vegetables stains at a higher temperature (60 ° C). Always rinse thoroughly.

Coloured clothing

Coloured clothing should be washed separately from white clothing with the correct laundry detergent. Never use chlorinated detergents for this.

Drying and ironing

Preferably do not use a tumble dryer. By using a dryer the elasticity of the fabric can lose stretch. Centrifuge the clothing at half speed and dry afterwards half wet on a non-wooden hanger with the buttons closed for the best result.

If it is necessary to iron the clothes, follow the instructions on the label. Always iron

inside out. The cuffs and collars must never come into direct contact with the iron. Use a separate piece of fabric to put in between.

Extra tips

- Be careful with makeup (foundation). This can cause difficult stains.
 - Treat perspiration stains as quickly as possible. The acid content can affect the fabric.
 - Do not use alcohol-based deodorants.
 - Tie the ties of an apron or skirt together or use a laundry bag. The ties do not get tangled or hit the drum.
-

Washing instructions Denim clothing

Use of detergent

- Do not use fabric softener.
- Make sure you have the right detergent.
- Never put more than four items of clothing in a non-professional washing machine. Washing increases the weight and the load quickly becomes too heavy.

Watch the temperature

- Washing at a low temperature prevents discolouring or shrinking.
- With a long prewash program, stains can also be deleted at low temperature.
- By use of a tumble dryer the elasticity of the fabric can lose stretch.

Drying and ironing

- Use a washing line to dry. Preferably with a plastic hanger.
- Outside drying? Turn the laundry inside out to prevent discolouring by the sun (UV).
- Ironing works best at a low temperature. Check the laundry label.
